

## CONSENT FOR RESEARCH

When TSCDR donor provides consent for being registered as a stem cell donor he/she is informed that may also be contacted for other non commercial research projects related to either HSCT or TSCDR purposes, or for extended genetic investigation. In case there is a request for using his/her blood for biological study not strictly related with the donation, the donor is asked for providing a specific consent for the only purpose the study indicated. When this kind of request arrives, TSCDR follows this procedure:

TSCDR donor coordinator is responsible to counsel the donor (according to the opinion and suggestion provided by the Stem Cell Committee) and to explain any detail of the study, ensuring the donor about the maintenance of the anonymity. The donor is free to ask any further detail that may help him/her for deciding.
